New in FTK and AD Lab 7.1, image and facial recognition and APFS parsing

New! FTK® and AD Lab 7.1

Digital investigations are complex and the growing volume of digital evidence can complicate and prolong investigations leading to backlogs and potential missed evidence. With new innovations in **FTK and AD Lab 7.1** you can accomplish your mission faster using the market's premier tools for investigation.

You already know FTK can help you zero in on relevant evidence quickly, conduct faster searches and dramatically increase analysis speed. With 7.1 you will notice more mobile capabilities resulting in fewer tools needed to complete the investigation, deeper analysis and more time saved. Using anything else could leave data undiscovered.

This release features advanced **image and facial recognition, APFS parsing** and more, allowing you to analyze all mobile, image and computer data simultaneously, saving time and eliminating the need to pass evidence between applications.
